Aids clinical reasoning and reflection on one's own work

CLINICA is a simulation program that allows you to perform interactive clinical cases in the classroom or in distance learning, interacting with a virtual patient. The system is flexible and allows you to create original and innovative scenarios and teaching interactions, in line with training requirements.

Training Models

CLINICA can be used in different training formats:

- Class-based interactive training
- Blended learning
- Distance learning

Collect data and statistical analysis

A variety of metrics are available for assessing the decisions made by participants such as appropriateness or financial resources; the statistical reports allow you to have a holistic assessment of the tasks quickly and exhaustively.
